

WhatsApp OMS

Guide for everyone who uses the website

Signing in

Website	https://oms.ysps.shop
Administrator	Username admin · Password Ysps@123
Everyone else	Your own username and a temporary password from the administrator. You choose your own password the first time you sign in.
New browser?	A 6-digit code is emailed to you the first time you sign in from a browser the system has not seen. Enter it once — that browser is then remembered.

Everyone should have their own login

Replies are stamped with the username of whoever sent them, so shared logins make that record meaningless. The administrator account can also add and remove users — keep its password with the administrator only.

The screen

Left	All your WhatsApp chats. New messages come to the top with a green count.
Middle	The conversation. Type your reply at the bottom.
Right	Products found in the message you clicked.

Processing an order

1. Click a chat on the left.
2. Press **Extract** on the customer's order message. Products appear on the right, in the order the customer wrote them, each with the **line number** it came from. Lines that are fully matched also turn green inside the message itself, so you see what is left to do.
3. Rows with a **light-green background** were recognised. **White** rows with an orange edge need you: click one and pick from the list (it shows everything, product numbers first) or type to search.
4. Wrong row — a piece of text that is not a product? Press its **X**. The system remembers and will not extract that wording again (the message at the bottom has an **Undo**).
5. Need something the customer did not write (a reducer, a fitting)? Press the **+** on a row to add an item under that line, or **+ Add item** at the bottom of the list.
6. Check the quantities in the small boxes.
7. Click **Copy** — the order is on your clipboard, ready to paste into DDI.
8. Type the order number DDI gives you into the **DDI order #** box and press Save. The box is required — the message then shows “Processed by you · DDI #...”.

One order sent as several messages

If a customer sends an order in pieces, click **Extract** on each message in turn — the products stack up into one order. Click an extracted message again to remove just its lines. **Copy** finishes them all together.

Saving an order twice

If someone already saved an order and you press Copy again, the system asks first and tells you who saved it and with which DDI number. Cancel keeps everything as it was.

It learns from you

Every product you match by hand is remembered, and every wrong row you X-remove is remembered too. The same wording matches — or is skipped — automatically next time, so this gets more accurate the more you use it.

What the labels mean

Label	Meaning
Extract	The button on a message that pulls its products out
Extracted	Its products are showing on the right
Processed	Already copied — shows who did it
Re-Extract	Load it again

Replying

Type in the box at the bottom and press **Enter**. Use **Shift + Enter** for a new line. To tag someone, type @ and pick their name from the list — they get a notification.

Attachments: the paperclip sends a photo or file. **Voice notes:** the microphone records one — a bar shows the time with **Cancel** and **Send**, and it arrives in WhatsApp as a real voice message. **Emojis:** the smiley button opens a picker with a search box (type “fire”, “thanks”, “truck” ...) — the ones you use most move to the top by themselves.

Click the small ■ arrow on any message (or right-click / press and hold) to **React with an emoji** (the row on top — the customer sees it, like WhatsApp; the + opens the full emoji search), **Reply**, **Copy**, **Forward**, **Star**, **Pin**, **Download** a photo or file, or **Delete** — Delete only appears on messages you sent yourself, and “for everyone” also removes it from the real WhatsApp chat.

Your replies are signed with your username automatically, so everyone can see who sent them. Messages typed in WhatsApp on a phone are not signed.

There is no undo

Messages go straight to real customers the moment you press Enter. Read it back before sending, and send one message at a time.

If the screen goes blurry

A message will explain why. “**Connecting...**” clears on its own in about a minute. Anything else — especially “**needs to be re-linked**” — means WhatsApp is disconnected and nothing can be sent or received: tell your manager. Nothing is lost; messages arrive once it reconnects.

Quick keys

Enter

Send

Shift + Enter	New line
@	Tag someone
Esc	Close the tag list

For administrators only

The **Users** link appears in the header only for administrators. Everyone else will not see it, and cannot open those pages.

Add someone	Users → + Add user . Usernames are letters and numbers only — no spaces or symbols. Give them the temporary password; they must change it at first sign-in.
Suspend someone	Edit → set to Disabled . They are signed out everywhere at once and their history is kept.
Reset a password	Edit the user and set a new one. They will be asked to change it when they next sign in.
Re-link WhatsApp	Only from the server itself, and only when the screen says WhatsApp needs re-linking. See the Administrator Guide.

Product prices and stock update themselves twice a day from the DDI export email — nobody needs to upload anything. Full details, server commands and troubleshooting are in the separate **Administrator Guide**.
